WIDESPAN

WIDE SPAN SHELVING

WWW.METALWARE.CA

Wood Shelf

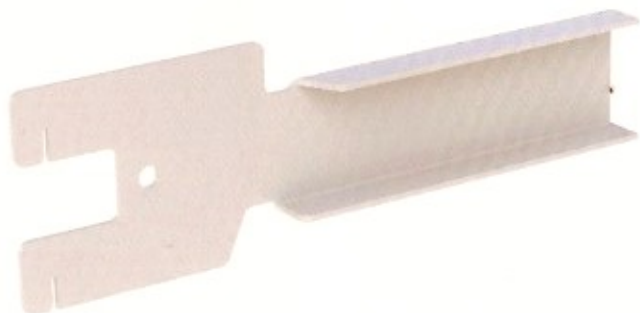

Wood shelves for our wide span line are available in a multitude of sizes to meet your requirements. We also offer wire mesh or solid steel shelves.

Post

A 14 gauge roll formed post with 2" slots to allow easy adjustability of the unit's height. Splice posts together to create a mezzanine catwalk system.

Beam

2" profile beams made of 13 gauge steel are the main shelf support. Available in a variety of widths and capacities.

Frame Connector

Frame connectors are used to connect posts together from front to back. Refer to capacity charts to determine the number of connectors required.

Tie Bar

Tie bars are designed to avoid buckling on longer beams. Placed between the two beams, they will also increase the capacity of the level.

Foot Plate

Foot plates are used to anchor the units to the floor. Highly recommended for units of 8 feet or taller.
